

Banner Monitor — Excel Update Prescription

Purpose

Update the Banner Monitor website whenever the campaign Excel file changes.

Files

The project folder is:

D:\Good KoDz\Banner Monitor

The important files are:

- Campaigns_of_Siavash_edited.xlsx
- index.html
- logo-with-title.webp

Every time the Excel changes

Step 1 — Replace the Excel

Put the new Excel file into:

D:\Good KoDz\Banner Monitor

Keep the filename exactly:

Campaigns_of_Siavash_edited.xlsx

Step 2 — Update the website data

Run the project's Excel → HTML data update process.

IMPORTANT: Do not manually edit index.html unless the project specifically requires it.

The goal is:

Excel → update HTML data → GitHub

Step 3 — Check locally

Open:

index.html

in the browser and make sure:

- Campaigns are displayed
- Banner images are displayed
- Start dates are correct
- End dates are correct
- Jalali dates are correct
- Expired/active status is correct
- Layout looks correct

Step 4 — Save the changes to Git

Open PowerShell in:

D:\Good KoDz\Banner Monitor

Run:

git status

Then:

git add .

Then:

git commit -m "Update campaign data"

Then:

git push

Step 5 — Wait for GitHub Pages

GitHub Pages will automatically deploy the new commit.

Website:

<https://siava-sh.github.io/BannerMonitor/>

The normal workflow

Every future update should basically be:

NEW EXCEL ↓ Replace Campaigns_of_Siavash_edited.xlsx ↓ Update HTML data ↓ Check index.html ↓
git add . ↓ git commit -m "Update campaign data" ↓ git push ↓ GitHub Pages updates website

IMPORTANT

Do NOT delete:

index.html logo-with-title.webp

Do NOT create a new repository.

Do NOT run git init again.

Do NOT run:

git remote add origin ...

The repository is already connected.

The existing remote is:

<https://github.com/siava-sh/BannerMonitor.git>

The main branch is:

main

The live website is:

<https://siava-sh.github.io/BannerMonitor/>
